

HUMAN COMPUTATION WORKSHOP 2009

A KDD 2009 Workshop

June 28, 2009 Paris, France

April 18 Paper submission due
May 16 Acceptance announcements
May 22 Camera-ready paper submission due
June 28 Half-day workshop at KDD

Human computation is a new research area that studies the process of channeling the vast internet population to perform tasks or provide data towards solving difficult problems that no known efficient computer algorithms can yet solve.

HCOMP 2009 brings together academic and industry researchers in a stimulating discussion of existing **human computation applications and future directions** of this new subject area. We solicit papers related to various aspects of both general human computation techniques and specific applications.

An integral part of this workshop will be a **demo session** where participants can showcase their human computation applications.

Topics of interests include, but are not limited to:

- Abstraction of human computation tasks into taxonomies of mechanisms
- Theories about what makes some human computation tasks fun and addictive
- Differences between collaborative vs. competitive tasks
- Tools and platforms to support human computation
- Domain-specific implementation challenges in human computation games
- Benefits of one-time versus repeated labeling
- Cost versus reliability of labelers
- Game-theoretic mechanism design of incentives for motivation and honest reporting
- Design of manipulation-resistance mechanisms in human computation
- Concerns regarding the protection of labeler identities
- Active learning from imperfect human labelers
- Creation of intelligent bots in human computation games
- Limitations of human computation
- Effectiveness of CAPTCHAs

Organizing Committee

Paul N. Bennett	Microsoft Research
Raman Chandrasekar	Microsoft Research
Max Chickering	Microsoft Live Labs
Panos Ipeirotis	New York University
Edith Law	Carnegie Mellon University
Anton Mityagin	Microsoft Live Labs
Foster Provost	New York University
Luis von Ahn	Carnegie Mellon University

Program Committee

Serge Belongie	University of California at San Diego
Laura Dabbish	Carnegie Mellon University
Ralf Herbrich	Microsoft Research, Cambridge, UK
John Langford	Yahoo! Research
David Parkes	Harvard University
Zoran Popovic	University of Washington
Paul Resnick	University of Michigan
Victor Sheng	New York University
Alexander Sorokin	University of Illinois at Urbana-Champaign
