

Human Computation Workshop 2011

August 8, 2011 San Francisco, CA, USA

An AAI 2011 workshop

April 22 Paper submission due
May 13 Notification of acceptance
June 3 Camera-ready paper due
Aug 8 Full-day workshop at AAI

Human computation is a relatively new research area that studies how to build intelligent systems that involves **human computers**, with each of them performing computation (e.g., image classification, translation, and protein folding) that leverage human intelligence, but challenges even the most sophisticated AI algorithms that exist today.

HComp 2011 brings together academic and industry researchers in a stimulating discussion of existing **human computation applications** and **future directions** of this area. We solicit **papers, posters** and **demos** related to various aspects of both general human computation techniques and specific applications. Topics of interests include, but are not limited to:

- Programming languages, tools and platforms to support human computation
- Domain-specific challenges in human computation
- Methods for estimating the cost, reliability, and skill of labelers
- Methods for designing and controlling workflows for human computation tasks
- Empirical and formal models of incentives in human computation systems
- Benefits of one-time versus repeated labeling
- Design of manipulation-resistance mechanisms in human computation
- Concerns regarding the protection of labeler identities
- Active learning from imperfect human labelers
- Techniques for inferring expertise and routing tasks
- Theoretical limitations of human computation

Organizing Committee

Luis von Ahn	Carnegie Mellon University
Panagiotis G Ipeirotis	New York University
Edith Law	Carnegie Mellon University
Haoqi Zhang	Harvard University
Jing Wang	New York University

Program Committee

Foster Provost
Winter Mason
Eric Horvitz
Ed Chi
Serge Belongie
Paul Bennett
Yiling Chen
Kristen Grauman
Raman Chandrasekar
Rob Miller
Deepak Ganesan
Chris Callison-Burch
Vitor R. Carvalho
David Parkes
Markus Krause
Jennifer Wortman Vaughan
